Assistive Technology Summer Camp
for Students Entering Grades 4-12, July 27-30, 2020

Students with reading and writing challenges often have great ideas but have trouble accessing information or getting their thoughts on paper. At our assistive technology summer camp students will use a variety of apps, extentions, software, and websites to help them read, gather information and write effectively. By the end of the camp students will be able to:

Use technology to have electronic text read (text-to-speech).

Use study skill tools and extensions to be able to complete online research or summarize an article.

Use a graphic organizer to organize thoughts to assist in the writing process.

Use word prediction to accommodate difficulties in the area of spelling during writing.

Use speech to text to accommodate difficulties in the area of spelling and typing during writing.

Technology covered will be specifically applicable to the use of Chromebooks in the school environment. The camp will be taught by Hyde Park Day School instructors, who have expertise in accommodations for students with dyslexia. This camp is for children who would benefit from learning technology features that will accommodate difficulties in reading and writing. Students must bring a laptop or Chromebook.

Cost: $125/student by June 15, 2020
$150/student after June 15
Choose from 2 sessions:
July 27-30, 2020
12:00 - 1:15 PM or
